## PROJECTS

### **Agenteo — AI Voice Assistant for Reservations**

3 months

Intelligent voice assistant capable of answering customer calls, handling inquiries, checking availability, and managing reservations for restaurants, barbershops, clinics, and other service businesses. Utilizes speech recognition, text-to-speech, SIP routing, and telephony infrastructure to provide natural and seamless interactions.

### **LinkSphere — Automated PBN SEO Service**

2 weeks

Automated private blog network (PBN) system that creates and manages interconnected websites to generate high-quality backlinks and optimize SEO for target websites. Manages domains, content publication, and link placement to improve visibility and search engine ranking.

### **Risk Vision — AI-Powered Risk Management Platform**

1 month

Developed during the Bolt Hackathon, this AI-powered risk management platform identifies potential project risks, suggests solutions, provides mitigation strategies, and integrates task tracking. Built according to hackathon requirements using Bolt for workflow orchestration and automation, ReactJS for a responsive user interface, and Supabase for real-time data management and authentication, delivering a complex and efficient system for risk prediction and monitoring.

### **MyFeedPro — SaaS for NFC Cards**

1 month

SaaS platform enabling clients to create full profiles and receive NFC cards that redirect to their online profile. Features a homepage, a user dashboard for feature access, an admin dashboard for user management, and a profile page listing all users. Facilitates interaction and centralized management of client data.
